...

A group of cyclists are shown in a race or training session on a blue track. They are wearing various colored jerseys (blue, pink, yellow, white) and helmets (orange, blue, white, black). The cyclists are in motion, with some looking forward and others looking slightly to the side. The background is blurred, showing more cyclists and spectators.

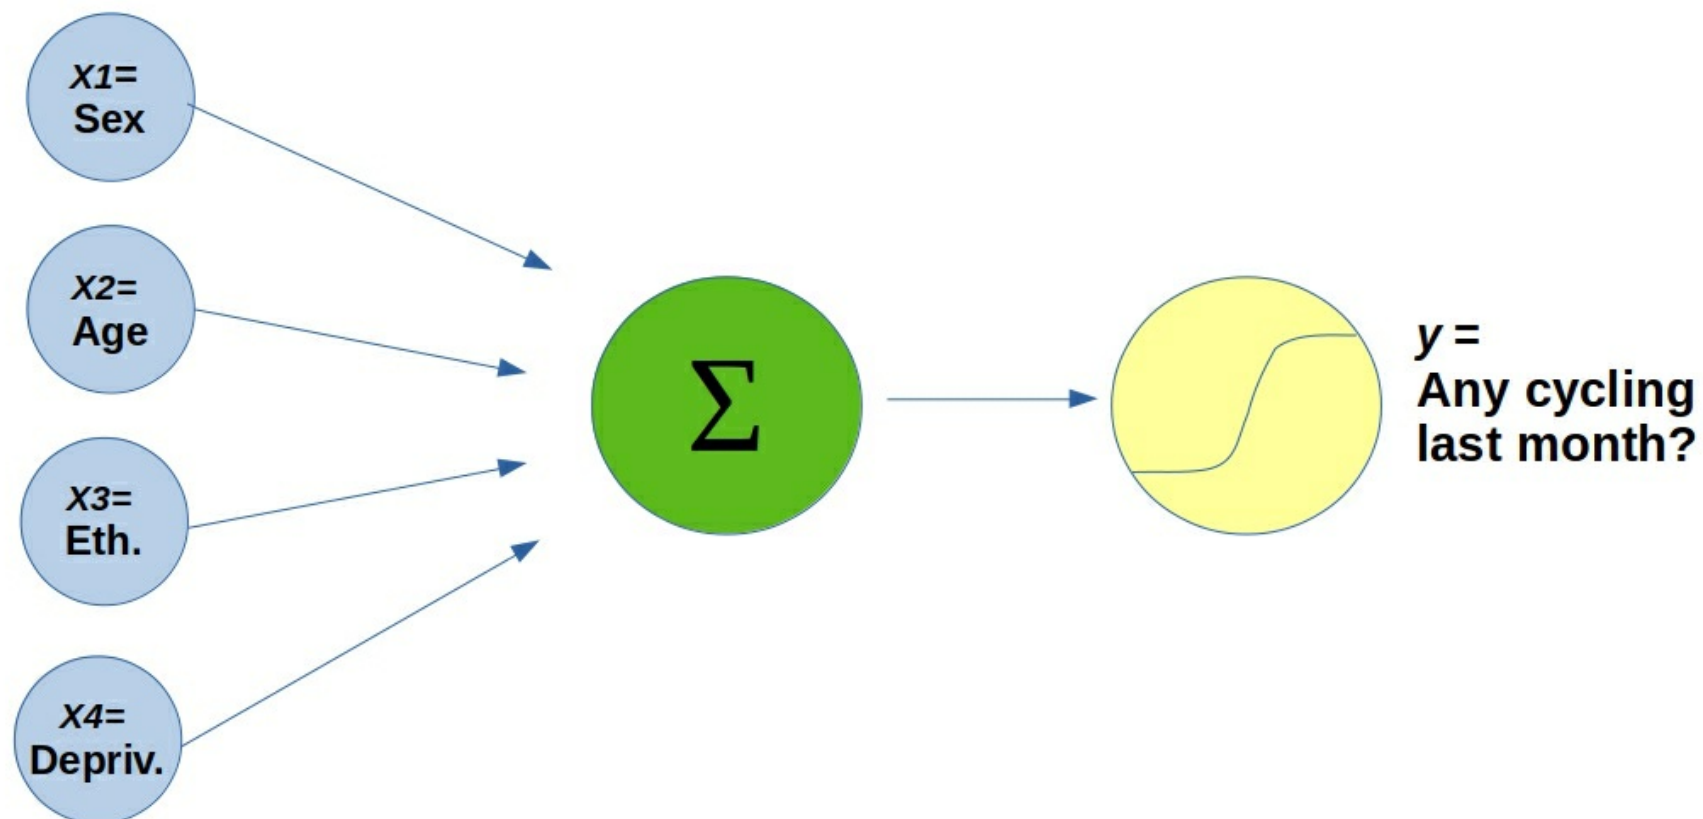

What is the magnitude of cycling inequalities currently in England?

Method

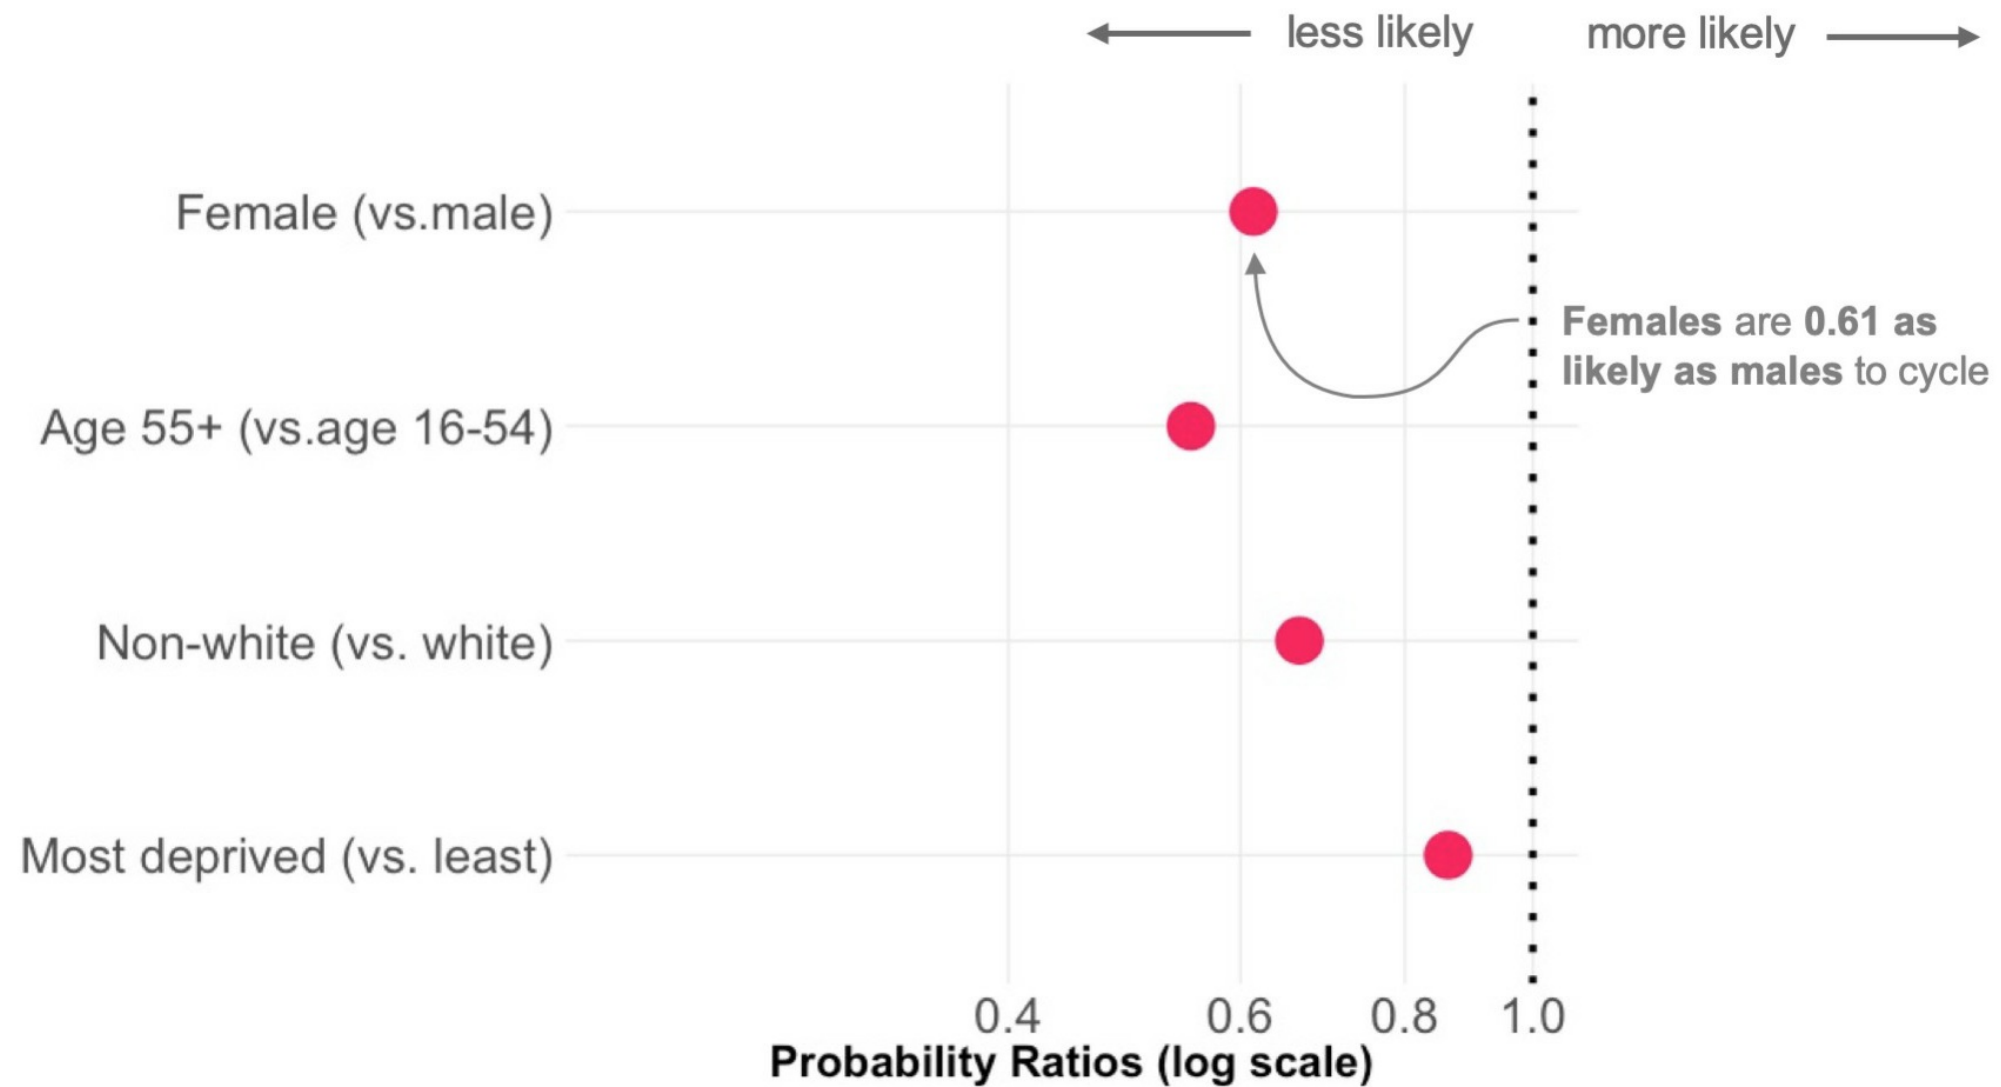

- **Data:** Active Lives Survey 2015-2018 (sample of ~500,000 adults).

- **Statistical analysis:** Probability Ratios (PRs) using logistic regression.

Results

Conclusion

- Substantial **inequalities in cycling participation in England** are found in relation to gender, age and ethnicity.
- **More research is needed** to identify the barriers that create these disparities.

Thanks!
